DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, 8-10, drawn to reducing BNIP3 mRNA in a cell, classified in class 514, subclass 44.
- II. Claims 1, 5-10, drawn to interfering with BNIP3 protein function in a cell, classified in class 435, subclass 4.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as useful together, and have different modes of operation because the invention of Group I targets mRNA manipulation, while that of Group II targets protein manipulation. Furthermore, the searches for methods of targeting RNA are non-coextensive and divergent from those for manipulating protein levels, and to search both in a single application constitutes a serious search burden on the office. Restriction is proper therefore.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
